

Weekly Progress Report

Student Name: Farooq Omar Issa Abdullah	Student ID No: 0226499
Date:	Report No: 7
Name of Institution: PayOne	Department: Software Development
Training Site: Al Amira Basma St. 194, Amman, Jordan	Tel. (At Site): 0798110930
Activities Completed: - Reviewed the REST API requirements and mapped the existing operations to JSON endpoints. - Added Jackson JSON serialization with Java date/time support. - Created the /api/* servlet routes for authentication and user operations. - Added an API authentication filter using the existing session and password-change rules. - Added safe response mapping that excludes password hashes and internal security fields. - Added one consistent JSON error format and appropriate HTTP status handling. - Connected API routes to the existing authentication, directory, password and audit services.	
Activities in Progress: - Completing user and role create/edit/delete endpoints through shared management services. - Verifying that REST permission checks and validation match the JSP application. - Documenting endpoint bodies, responses and status-code behavior for a future Angular client.	
Issues/Recommendations: The existing application returned complete JSP pages, while Angular will require JSON data. I added a transport-only API layer and explicit response mapping, while keeping authentication, validation and business rules in services rather than copying them into each endpoint.	
Comments: The main REST structure is operational. Authentication, session enforcement, safe JSON mapping and core user endpoints can now support a separate frontend without exposing persistence entities.
