(At Site):</b><br>0798110930       |
| <b>Activities Completed:</b> <ul style="list-style-type: none"><li>- Replaced hardcoded Admin/User checks with function-based access control stored as data</li><li>- Added system_functions, roles and role_functions tables and Hibernate entities.</li><li>- Built role creation, editing, deletion and function-assignment screens.</li><li>- Added role selection to Edit User.</li><li>- Enforced each permission on the server and hid unavailable UI actions.</li><li>- Protected the final full administrator from deletion or permission removal.</li></ul> |                                            |
| <b>Activities in Progress:</b> <ul style="list-style-type: none"><li>- Testing custom roles with different combinations of VIEW_USERS, EDIT_USER, DELETE_U</li><li>RESET_PASSWORD and MANAGE_ROLES.</li><li>- Verifying the first registered account receives the full Administrator role.</li><li>- Reviewing the complete access-control request flow.</li></ul>                                                                                                                                                                                                    |                                            |
| <b>Issues/Recommendations:</b> <p>A simple role name check could not support changing business responsibilities safely. Permissions were normalized as database records and resolved through a shared Permission component, while FullAdminProtection prevents administrative lockout.</p>                                                                                                                                                                                                                                                                            |                                            |
| <b>Comments:</b> <p>The authorization model became flexible and data-driven. Administrators can define roles w changing Java code, while server checks remain authoritative.</p>                                                                                                                                                                                                                                                                                                                                                                                      |                                            |
